a special place for your little miracle
INTRODUCTION

Khatav Mother and Child Hospital (KMCH) is a specialists' hospital established to provide high quality, comprehensive health care services to women and children of all classes of society over past 30 years.

All parents dream about what having a baby will mean in their lives. Having a premature baby or a baby who requires intensive medical care may alter or defer this dream.

As a parent with a new baby requiring NICU, you may find it challenging to provide the required emergency care in routine maternity homes at the last minute.

Now KMCH has opened Khatav Hospital NICU to provide remarkable care to premature babies, multiple birth babies, and special need newborns through the Neonatal Intensive Care Unit (NICU).

A NICU is a unit that cares for infants and is staffed and equipped to provide comprehensive, high quality care to well and sick newborn, infants and their families.

Equipped with the latest lifesaving technology, our NICU is staffed at all times by doctors specializing in new born baby care and nurses, all are trained to care for the most complex and high risk situations among newborns.
